DASHBOARD REPORT

Global Superstore Analysis

A data-driven review of sales performance, profitability, and strategic opportunities.

SLIDE 2

Overall Performance

How is the business performing at a top level?

\$1.79M

Total Sales

Gross revenue across all regions and categories

\$220.41K

Net Profit

\$220.41K retained after costs

22%

Return Rate

Relatively high — impacts net profitability

 **Key Insight:** Profit is positive, but a **22% return rate** is elevated and directly erodes margins. This warrants immediate attention.

Sales by Category

Which product categories are driving the most revenue?

Category

③ **Key Insight:** Technology is the primary revenue driver at ~\$0.57M, leading Furniture and Office Supplies by a significant margin.

Category Contribution to Total Sales

How balanced is our revenue mix across categories?

Technology — 36.99%

Largest share; the business leans heavily on this segment.

Furniture — 32.73%

Strong mid-range contributor with growth potential.

Office Supplies — 30.28%

Smallest share, but closely matched to Furniture.

Key Insight: Heavy reliance on Technology. A disruption in this category would significantly impact overall revenue.

Manager Performance

Which managers are contributing the most profit — and where is the gap?

Manager

③ **Key Insight:** Derrick Snymers and Dolores Davis account for a disproportionate share of profit. The bottom two managers contribute less than half. Profit contribution is **not evenly distributed**.

Sales by Region

Where is revenue being generated geographically?

Regional Breakdown

Western US — \$0.58M

Top-performing region

Eastern US — \$0.53M

Close second, strong market

Central US — \$0.40M

Mid-tier, room to grow

Southern US — \$0.30M

Lowest performer — needs focus

Key Insight: West and East lead total sales. South is underperforming and may benefit from targeted investment.

Profit Trend Over Time

Is profitability consistent — or volatile?

Profit ranges from **\$3K to \$31K**, indicating high volatility.

- 1 – Lowest profit in **Q1 2012 (~\$3K)**, highest in **Q3 2014 (~\$31K)**.
- 2– No consistent upward trend across quarters.
- 3– Sharp spikes and drops reflect unstable performance.
- 4– Variations likely driven by seasonality or cost fluctuations.

 **Key Insight:** Profit fluctuates significantly — from a low of ~\$3K to a peak of ~\$31K. This instability signals inconsistent operational or sales performance over time.

Key Insights

What does the data tell us about the state of the business?

1

Sales $\neq$ Profit

High sales volume does not guarantee high profit. Costs, discounts, and returns erode margins significantly.

2

22% Return Rate

A return rate this high directly reduces net profitability. Every returned item is lost revenue and added cost.

3

Category Over-Reliance

With Technology at 36.99% of sales, the business carries concentration risk. A slowdown here hurts overall performance.

Recommendations

What actions should leadership prioritize to improve performance?

Reduce Return Rate

Investigate root causes of the 22% return rate. Improve product quality checks, descriptions, and post-sale support.

Lift Underperforming Categories

Furniture and Office Supplies lag behind Technology. Targeted promotions or bundling strategies could close the gap.

Develop All Managers

Support Flannery Newton and Lon Bohner with coaching or resource reallocation to replicate top-performer results.

CLOSING QUESTION

What is the fastest way to increase profit?

Cut Returns First

Reducing the 22% return rate has an immediate and direct impact on net profit with no new revenue required.

Empower Top Managers

Scale what Derrick Snyders and Dolores Davis are doing. Their playbook already works.

Stabilize Profit Trend

Address the root cause of fluctuation — better forecasting, inventory management, and cost controls.
